

A break-out of 28550 & a triangle false exit

On the way to the next target of 20K the price has formed a triangle, exit out of which might be up to 33K (on the wedge upper border). The new bearish attack is assumed from about 30K where the stop orders can be already placed. 12-13K are now visible as a "station" to break 10K later.
