

An impressive Price Action of Bitcoin

Happy Tuesday to you! Again you all had all the weapons that we used to take in the not so distant past in order to take advantage of such a Price Action of Bitcoin. Deep & shallow retraces that followed the core "sweet zone" of the channel coupled with several sophisticated traps on Friday and Monday night - and the price is already 2.5K lower than in the doorway of the weekend. You can be surely more aggressive in adding on to your shorts in an exit of any consolidation during either current set-up execution or any one which is in store of us below 20K.
