

## Rune is likely to be “ruined” by the market

Today we would like to attract your attention to quite an interesting Rune's graph. We've got the peculiar "triple bottom" at the level of 3 dollars, a deep retrace up to 78.6% and a shallow one @38.2%. Therefore, let us dare to make an assumption that sooner or later the 3-dollar price will not be able to stand, especially with the current weakness in place, and once it happens we are also likely to see 40 cents per coin as it was in Autumn 2020.
