

The 3 a.m. CET pump in the extreme price weakness & new targets on the “floor”

Though the previous 58500 swing high was more than enough to sell off but taking off the stops above the 10th of May 59580 and not giving only 0.06 USD to the market to reach 60K is a good idea indeed. With this impetus in the extreme weakness area the targets upon the channel lower border break-out should be automatically extended - from 24.5K to 12.3K. The markets move exclusively according to the 3rd law of Newton – the force of action is equal to the force of reaction.
