The fake news on Walmart–Litecoin partnership has widened triangle consolidation

What a messy up & down price moving was at 2 p.m. CET yesterday! It surely corrected the whole pictures on both BTC and ETH big timeframe charts. We've got now the same triangles but extended in completion perhaps up to the end of September. The possible exits will be relevantly lower again with the targets lowered on BTC – 33K as well as on ETH – 2.3K. The best piece of advice for the time of price behavior within such a complexed sideways moving pattern – to stand aside and if you failed to go short earlier – chase the local top spins for a new trap.
